PERSONAL PROFILE

I am a full-stack developer with a background in the music industry, not only on the artist side but also in pro audio sales and installation. My interest in programming originally stemmed from the idea of doing something in life that combined both logical thinking and creativity. Through research and suggestions I set out on a life changing career path that I can keep growing with.

AREAS OF EXPERTISE

- Javascript, Python, HTML, CSS, SCSS
- Knowledge of React, and Django frameworks

TECHNICAL EXPERIENCE

NASHVILLE SOFTWARE SCHOOL 2020 – PRESENT

Six month immersive virtual full time software development bootcamp focusing on HTML, CSS, Javascript, React, and server side fundamentals with Python & Django, and learning anchored with experience working on individual and virtual group projects.

INDIVIDUAL PROJECTS

DAYSHEET: Full CRUD application that I built to help traveling musicians and tour personnel. When a user logs in they have the ability to create a tour, then they have the ability to create an itinerary for each day on the specified tour. The user also has the ability to create and track personnel members for correlating tours.

<https://github.com/Dylan-Trevor-Rowe/daysheet-capstone>

MARVEL-CHARACTERS: An adventure into the world of Marvel Characters. Depending on which button you click, it will print cards from a different Marvel group. I utilized Javascript array methods to help filter the characters by Team, as well as changing the color of the image border to either pink if female, or blue if male. This application was built using Vanilla Javascript, HTML, & SCSS.

GROUP PROJECTS

NUTSHELL

- Worked on a virtual team of four to create a social networking site where a user could create events and tasks, list articles, and interact with other users.
- I was responsible for the Events portion of the project. I utilized Javascript, HTML, and CSS

Rare

- This project was completed in a 6 day Agile-SCRUM sprint. Our goals were to practice full stack development by creating a react client and python-Django back end.
